Building an interface

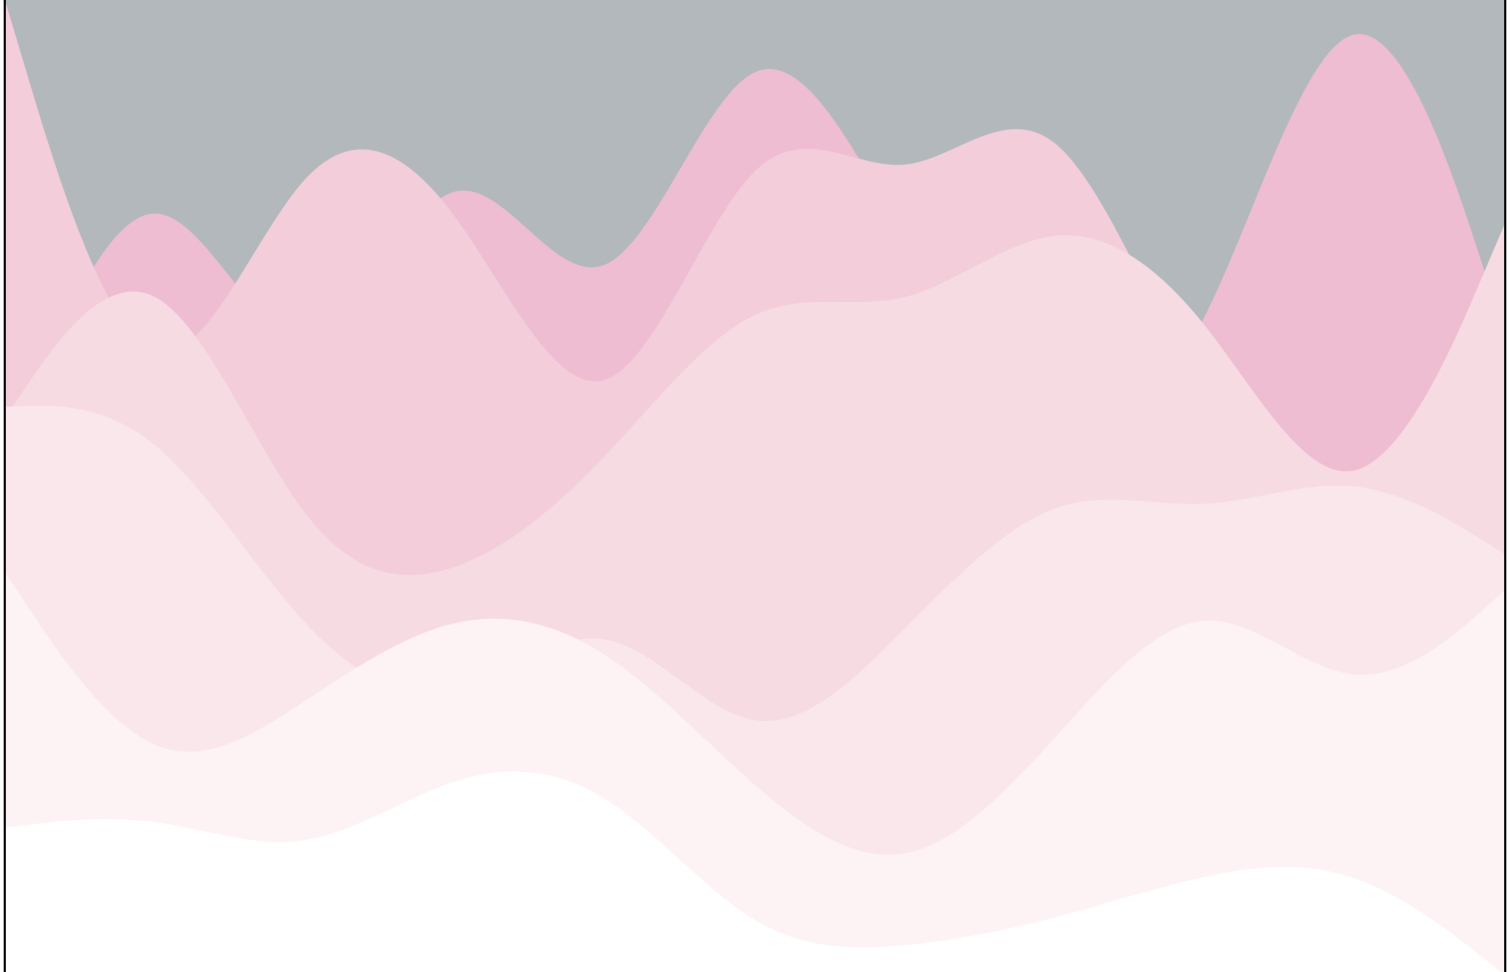

Piscine UX/UI — UI

Piscine UX/UI https://github.com/01-edu/UX-UI

Summary: A styleguide, a library, screens, motion, and a desirability test.

Prerequisites : The previous module of this piscine, or none if this is your first.

Version: 1.0

Contents

I Instructions 2
II Foreword 3
III Exercise 00: UI IV - Ex 1 - Styleguide 4
IV Exercise 01: UI IV - Ex 2 - Design system library 6
V Exercise 02: UI IV - Ex 3 - Design screens 8
VI Exercise 03: UI IV - Ex 4 - Animation 10
VII Exercise 04: UI IV - Ex 5 - Desirability testing 11

Chapter I

Instructions

The foreword is not an exercise. It will not be graded. The exercises start at the next chapter, from the easiest contract to the hardest. A later exercise is not taken into account if an earlier one does not hold.

Only what is in the turn-in directory of an exercise is looked at. Do not add files that the exercise does not name. The name of a deliverable follows the pattern in the exercise: `Name_FirstName_DeliverableName_Date_VersionNumber`.

You will not be given the gesture. The examples in an exercise sometimes carry a constraint that the sentence does not repeat. Read them. Your other references are the manual of the tool you picked, the person sitting next to you, and the links printed in the exercise.

The order is the order of the quest. Skipping a step because a later screen looks more interesting produces a screen nobody can explain.

About the pictures

The picture in the foreword is not a hint. The pale steps behind the text are the page ground.

About machines that write

You may use a tool to look up a term, the way you would use a dictionary. You may not replace an interview, a test, or a file with a generated text and sign it. If you cannot point at the person, the screen, or the line you claim, the exercise is not done.

Chapter II

Foreword

Gary Hustwit's *Objectified* (2009) films people who argue about a handle, a toothpick, a chair. The argument is the work. This quest is that argument, held on screens you draw yourself. There is a second shelf in the foreword, an AI playlist. It is there so you know what the tools sound like. It is not a licence to submit a generated deck.

Picture: JeuneCrack

Recommended watching. The videos are context. They are not the deliverable.

- UI - Introduction & Quest n°1, 01Edu https://www.youtube.com/watch?v=UbE6WMeuvQg&list=PLHyAJ_GrRtf-_aBft2jQL4-QAunn2bLvu
- Claude AI Enablement piscine, 01Edu https://www.youtube.com/watch?v=M94thLMc6vA&list=PLCiJelRloNB8

The last playlist is an AI piscine (*Claude AI Enablement*). Watch it if you want to hear how a model is sold as a design assistant. The files you turn in still have to come from your research, your screens, and your tests. A generated board that you cannot walk through does not count.

Chapter III

Exercise 00: UI IV - Ex 1 - Styleguide

	Exercise 00
UI IV - Ex 1 - Styleguide	
Turn-in directory : `ex00/`	
Files to turn in : `ex00/Figma file, named Name_FirstName_DeliverableName_Date_VersionNumber`	
Allowed functions : `Those named in the exercise`	

Context:

In this quest, you'll have to build your own interface.

After designing your own style guide with a moodboard, colors and typography, you can use the series of consistency principles, atomic design structure, the techniques to build you own library and then a series of screens. Step by step, you'll have built an animated high-fidelity prototype.

The very last step will be to test it on users to detect the impressions they get when they discover your app.

Once again, feel free to get as much inspiration as you need from existing design systems. Dribbble, consistency and structure are your best friends!

Instructions:

Your agency works on a digital product to create an e-commerce app for second-hand electronic devices. You collaborate with a UX designer from your team. They have deisgned the wireframes and pass it on to you!

Design a style guide (= a moodboard with typography + examples of typography with buttons, title, description and content).

Also think about the values and spirit you want to spread through this moodboard, we'll get back to it in Ex. 5.

Deliverables:

- A Figma moodboard that includes:
    - Pictures
    - 2 to 3 main colors

    - Examples of typography applied to graphic elements
        - Title
        - Description or subtitle
        - Content
        - Button

- Upload the Figma file on Github, labeled as follows: "Name_FirstName_DeliverableName_Date_VersionNumber". For example, it can be labeled as "Doe_John_MidFiPrototype_05242024_V1".
- Add a title within the file.
- Pay attention to the global aspect of the file. It must be clear, simple and easy to read. You can get inspiration on canva.com but don't overload your design with too much details!

Chapter IV

Exercise 01: UI IV - Ex 2 - Design system library

	Exercise 01
UI IV - Ex 2 - Design system library	
Turn-in directory : `ex01/`	
Files to turn in : `ex01/Figma file, named Name_FirstName_DeliverableName_Date_VersionNumber`	
Allowed functions : `Those named in the exercise`	

Instructions:

Based on the moodboard you designed in Ex 1, create a design system with at least 30 elements, including atoms, molecules and organisms, and include multistates.

Deliverables:

- A Figma file with a library including:
  - At least graphic design 30 elements
  - At least 5 atoms
  - At least 5 molecules
  - At least 5 organisms
  - At least 10 multistate variations
- Upload the Figma file on Github, labeled as follows: "Name_FirstName_DeliverableName_Date_VersionNumber". For example, it can be labeled as "Doe_John_MidFiPrototype_05242024_V1".
- Add a title within the file.
- Pay attention to the global aspect of the file. It must be clear, simple and easy to read. You can get inspiration on canva.com but don't overload your design with too much details!

Tips:

- Start by asking yourself what key elements may appear in an e-commerce app.
- Feel free to get inspiration from existing design systems. Browse Dribble and the Figma community!

Chapter V

Exercise 02: UI IV - Ex 3 - Design screens

	Exercise 02
UI IV - Ex 3 - Design screens	
Turn-in directory : `ex02/`	
Files to turn in : `ex02/Figma file, named Name_FirstName_DeliverableName_Date_VersionNumber`	
Allowed functions : `Those named in the exercise`	

Instructions:

Based on the wireframes and your design system library, take your mid-fidelity prototype to a high-fidelity level!

Select 5 screens that will show the user flow of a customer who:

- arrives on the homepage
- browses the content
- checks one product page
- adds the product to the cart
- checks out

Use your components, call to actions and visuals to complete the wireframes.

Deliverables:

- 5 high-fidelity screens from Figma
- Upload the Figma file on Github, labeled as follows: "Name_FirstName_DeliverableName_Date_VersionNumber". For example, it can be labeled as "Doe_John_MidFiPrototype_05242024_V1".
- Add a title within the file.

- Pay attention to the global aspect of the file. It must be clear, simple and easy to read. You can get inspiration on canva.com but don't overload your design with too much details!

Chapter VI

Exercise 03: UI IV - Ex 4 - Animation

	Exercise 03
UI IV - Ex 4 - Animation	
Turn-in directory : `ex03/`	
Files to turn in : `ex03/Figma file, named Name_FirstName_DeliverableName_Date_VersionNumber`	
Allowed functions : `Those named in the exercise`	

Instructions:
Animate your 5 screens on Figma. Think about multistate!!
Deliverable:

- An animated high-fidelity prototype on Figma
- Upload the Figma file on Github, labeled as follows: "Name_FirstName_DeliverableName_Date_VersionNumber". For example, it can be labeled as "Doe_John_MidFiPrototype_05242024_V1".
- Add a title within the file.
- Pay attention to the global aspect of the file. It must be clear, simple and easy to read. You can get inspiration on canva.com but don't overload your design with too much details!

Chapter VII

Exercise 04: UI IV - Ex 5 - Desirability testing

	Exercise 04
UI IV - Ex 5 - Desirability testing	
Turn-in directory : `ex04/`	
Files to turn in : `ex04/zip archive, named Name_FirstName_DeliverableName_Date_VersionNumber`	
Allowed functions : `Those named in the exercise`	

Instructions:

Run a desirability test!

The point of this phase is to make sure the values and the spirit you chose for your design.

- Get back to the values and spirit you chose in Ex 1. Extract 2 to 5 adjectives.
- Prepare a board with 25+ adjectives, randomly distributed.
- Show your design to 5 different people, and ask them to select the adjectives among the list from the board that they are inspired with.
- If the selected adjectives chosen by the users are consistent with the ones you had chosen, congratulations!
- If the selected adjectives chosen by the users are not consistent, that's fine! Make 3 suggestions about how to make your moodboard and library evolve.

Deliverables:

- A desirability testing board with 25+ different adjectives
- Pictures from the desirability test
- A PDF document with the outcomes of the desirability test

- If the outcomes are not consistent with the values, 3 suggestions on how to make the moodboard and design library evolve.
- Upload the documents on Github, in a zip folder named "ProjectTitle_Name_FirstName", with all project deliverables as follows: "Name_FirstName_DeliverableName_Date_VersionNumber". For example, the first deliverable can be named as "Doe_John_MidFiPrototype_05242024_V1".
- Add a title within all written documents.
- Pay attention to the global aspect of the deliverables. They must be clear, simple and easy to read. You can get inspiration on canva.com but don't overload your design with too much details!

Tips:

- Avoid confirmation biais: don't tell them the values and ask them to approve them!
- Good to know: Desirability testing is great to assess the impressions a design gives to the users. Whereas Usability testing is great to understand what users understand your prototype and how they navigate across the product.
